Kompetenzcheck Web Woche 4 - jQuery
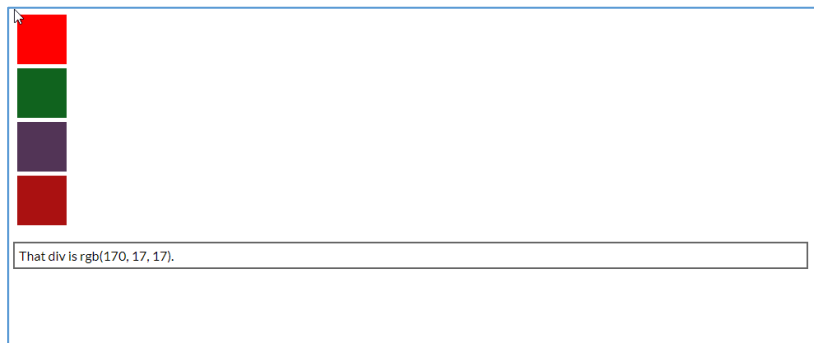

Time Limit: 1h

Helpful Links: https://www.w3schools.com/jquery/jquery_ref_selectors.asp

1) Use jQuery to find all <input> fields with a value of "Red", change the text of the next sibling <span> tag.
2) Find all <input>s that **do not** have the **name "color"** and append text to the <span> next to it.
3) Find all <input>s with an attribute name that starts with **'P'** and put text in them.
4) Insert some text before **all paragraphs** using jQuery.
5) Insert a HTML Element (e.g. **<div>**) before all paragraphs using jQuery.
6) Use jQuery to find **all children** of each division <div>, give them another color.
7) Display a message, when the **:focus** is removed from **<input> field 1.**
8) Add a click event to the **<div>** tags in the HTML code of **example 8,** when a <div> is clicked, the **background-color (RGB)** should be shown in the **<p>** tag. (e.g. That div has the background color of (170, 17, 17)).

9) **Animate** all paragraphs **<p>** to hide slowly when the left button is clicked, and show slowly when the right button is clicked.
10) Use the jQuery method .animate() and do something fun with it. Example: Animate a shape / or shapes, change its color, move it or change its size.
